

1. Describe your choice

(what data model, what internal representation you chose(flat file, tables,...), what external representation you are going to use(JSON, CSV, ...))

2. Explain it

(briefly describe your schemas, and what the document looks like in your format)

3. Sketch the application

(How you can use what you've designed)

Notes

what do we have:

Accident detail:

1. *accident type(accident, damage to property, incident/near miss, fire, ill health)
2. *Date
3. *Building
4. Time
5. Room No
6. School Department

Person detail:

1. *status (staff, student, visitor, concentractor, Other)
2. *name
3. *ID number
4. job
5. manager
6. telephone
7. email
8. school unit
9. *event description
10. *injury description
11. *treatment(no treatment, Treated by first aider, Injury in a hospital)
12. *absence(No absence, still absent, absent returned in 3 days, absent due to work-related injury)

Reporter detail:

1. *name
2. *job
3. email
4. *tel
5. school department
